Individual Homework. Turn in the following:

1. Write a short description of the work you did for the project over the last week. Focus your write up on: (1) clearly describing what you set out to do for the week; (2) clearly describing what you accomplished; and (3) reflecting on what went well for you during the week (in terms of progress), what didn’t, and what you will try to do to improve your productivity or teamwork within your team.

2. Write your reflections of the work you did over the entire semester, focusing on your personal time management in terms of project work, the amount and quantity of code you wrote for the project, how you provided leadership within your team, and what aspects you feel you need to improve upon next semester. To help with your reflection, go back over your task sheets for the semester, the code that you wrote, and other contributions you made to the team. Use this information within your write up to help clarify and make your statements more concrete.

3. Take one of the first five sections of your project status report and revise/edit it using the concrete items in the reading assignments on technical writing. Clearly state (a) what changes you made; and (b) what items from the reading assignments led to the change. Use as many items from the reading assignments as you can to help improve the writing of the section. The goal is for you to both draft an improved version of the section and also to demonstrate your understanding of the reading assignments. Each person on your team should select a different section of the status report to revise/edit.

Project Homework. This part should be done with your team. Work on the following as a group and hand in all work items asked for as a single copy on the due date. Your team should be finishing your seventh and final “sprint” of the semester. At the end of the week, your team must:

1. Turn in a completed set of task sheets for the week.
2. Continue to use GitHub to store all of your project documents, source code, etc.
3. Hand in your final sprint review and retrospective for this semester.
4. Turn in (via email) a completed and signed status report as a PDF document.
