

**To-Do**

Lecture 10 went through more examples of recursive descent parsing. Before Monday, do the following.

1. **Work on HW-2.** You have everything you need to finish HW-2. You should try to finish it (or get close to finishing it) this weekend.
2. **Review the lecture notes.** Go back through the lectures notes from Friday and make sure you can write all of the recursive descent functions we went over in class from scratch.
