

**To-Do**

Lecture 19 wrapped up the MyPL implementation (hints) for the semantic checker (HW-4). Be sure to do the following.

1. ***Finish Coding up HW-4.*** You have everything you need to finish HW-4. You should now be spending your time outside of class (for CPSC 326) working on filling out the remaining visit functions and testing your code. Again, be sure to use the unit tests and now the type inference rules for guidance on semantic checker behavior. Of course, you are always encouraged to post questions on Piazza and/or ask me questions.
2. ***Review the lecture notes.*** Be sure you understand the basic ideas of checking functions, path expressions, and handling return statements. Be sure to use Piazza and ask questions if you need help. If you feel the need to post code, please only post small snippets (that aren't "giving away" an answer).
3. ***Project Proposal.*** Your proposal for the CPSC 326 final project (project part 1) is due Friday. Bring a hard-copy print out of your first and second choices to class.
