

To-Do

Lecture 23 wrapped up the MyPL VM architecture and provided an overview (tour) of the code for HW-5. Be sure to do the following.

1. **Work on HW-5.** You should have started HW-5 and be working towards finishing it. It is due this coming Friday.
2. **Review the lecture notes.** Be sure to look over the lecture notes for HW-5.
3. **Review VM Instructions and Example Problems.** Be sure to review the instruction set for the MyPL VM (you'll need to know these for quizzes, exams, and for understanding what we discuss for code generation). Also, be sure you can do the example problems from Monday.
