

**To-Do**

Lecture 26 covered additional code generation examples, focusing on loops, structs, and arrays.

1. **Turn in HW-5.** You should be finished with HW-5. We will pull the assignments on Monday.
2. **Start on HW-6.** HW-6 is now available. This is the last step in our implementation of MyPL. You should grab the code and get started.
3. **Review the lecture notes.** Be sure to study the lecture notes and the examples. You will be expected to generate the VM instructions for each of the examples. You will also be expected to understand the details of how to generate the code, which includes the use of the VarTable, and the general strategies required for loops, arrays, and structs.
