

To-Do

Lecture 36 went over additional algebraic type examples. Note the following.

1. **Start on HW-8.** You have everything you need for HW-8.
2. **Review the lecture notes.** Be sure to study the lecture notes and the examples. A good way to study for the topics we covered is also to start on work start on HW-8.

Things to Know / Do:

- Syntax for defining parameterized algebraic types in OCaml.
- Study the binary tree example and how it works.
- Go over the higher-order function examples in the lecture notes. You will need to understand the `map` function for HW-8.
