

To-Do

Lecture 9 covered the basics of recursive descent parsing. Before the end of the week, do the following.

1. **Work on HW-2.** Start writing recursive descent functions for HW-2.
2. **Review the lecture notes.** In particular, be sure you understand the helper functions in `SimpleParser` and can write the recursive descent functions for the running example in class from scratch. You will be tested on your ability to write recursive descent functions given a grammar. Additional examples will be given on Friday as well.
